

ABSTRACT

A method for automatic obtaining the ID number of items of a volume control program is disclosed. The method comprises three main steps: turning on a volume control program, detecting items and calculating an ID number of each item. The first step is turning on a volume control program, 10 for example, turning on the volume control program from a start catalog of Microsoft Windows. The second step is detecting items, which is searching a desired item whether present in a control plane of the volume control program. If the item is present in the control plane of the volume control program, an ID number of the item can be obtained. The third step is 15 calculating the ID number of the item, which is calculating the ID number of each item such as volume, left-right sound track and muteness by using the obtained ID number of the item.
